Vrrrt Cube

Your store

No need to guess anymore. We track every page where shoppers land, so you can see exactly how many leave and how many stay.

Step 1 — turn tracking on

Needs setup

Bounce is the biggest leak in e-commerce. Most shoppers who land leave within the first 30 seconds — before they ever see what you sell. It doesn't matter how they got there: the bounce is where the money bleeds out, and you can't fix what you can't see. Tracking is on, so we're already measuring your bounce page by page. The worst offenders show up below — and that's where a cube can fix it for you.

Turn on tracking

How to turn it on

the most shoppers, add a cube, and watch more of them stay.

Your store

No need to guess anymore. We track every page where shoppers land, so you can see exactly how many leave and how many stay.

Why track your store?

Bounce is the biggest leak in e-commerce. Most shoppers who land leave within the first 30 seconds — before they ever see what you sell. It doesn't matter how they got there: the bounce is where the money bleeds out, and you can't fix what you can't see. Tracking is on, so we're already measuring your bounce page by page. The worst offenders show up below — and that's where a cube can fix it for you.

On

Store discovery leaderboard

0 pages

These are the pages that need attention — the ones bleeding the most, worst first.

Tracking is on. The pages bleeding the most will show up here. Give it a few days.

Your cubes

Find the page losing the most shoppers, add a cube, and watch more of them stay.
